lo-flo™

nodour™
EXEON®

The lo-flo™ range use a deep bed of activated carbon, of a type suitably selected for the application, to provide control of non-compliant low flow and high concentration discharges, with correct prefiltration as required to maximise carbon life.

These systems are suitable for low airflows for a wide range of high concentration applications, including:

- Blood tank / offal tanks at abattoirs
- High concentration Chemical emissions
- Sewage & Waste venting tanks
- VOCs

ADVANTAGES OF USING THE lo-flo™

1. Very heavy duty construction
2. Simple 'plug & play' operation
3. Correct prefiltration will be discussed and applied to ensure maximum life of carbon
4. Low cost install
5. Can provide a mobile filtration solution for varying applications across site
6. Capacity for high contract times
