mid-flo™

nodour™
EXEON®

The Mid-flo™ range use a horizontal deep bed of activated carbon, a type suitably selected for the application, to provide control of non-compliant discharges.

These systems are suitable for low-medium airflows for a wide range of high concentration applications requiring long contact time, including:

- Anaerobic Digestion Facilities
- Food production odours including abattoirs
- Chemical emissions
- Sewage & Waste Odours
- VOCs

ADVANTAGES OF USING THE 'MID-FLO'™

1. Very efficient – removes virtually all odours, and flexible for a wide range of applications
2. Simple and relatively lightweight construction
3. PVC Construction, therefore highly corrosion-resistant and good UV resistance
4. Easy maintenance access
5. Carefully designed prefiltration available using a range of technologies including cool/reheat, dust filtration and even coarse scrubbers, to maximise activated carbon life
6. Simple, safe and clean procedure for filling Activated carbon, designed to suit the size of vessel
7. No water supply required
