The nellie™ extraction arm...
no-one comes closer

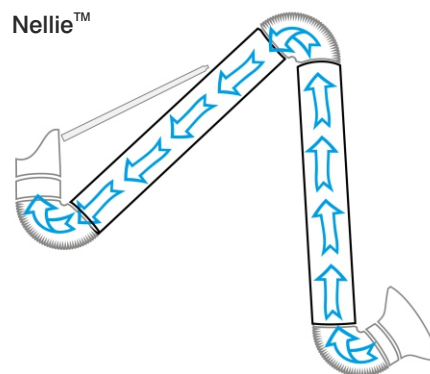

STANDARD EXTRACTION ARM VS NELLIE™

Standard Arm

Nellie™

These diagrams demonstrate how the Nellie™ will have no build-up of product on internal mechanisms, as there are none! This has multiple benefits including: increased airflow, reduced product contamination on joints, and reduced noise.

Sizes available:

Arm Diameter	Reach available					
	1.0m	1.5m	2.0m	2.5m	3.0m	4.0m
75mm	■	■				
100mm		■	■	■		
125mm			■	■	■	
160mm			■		■	■
200mm			■		■	■

For further information and part numbers see individual arm data sheets

THE NELLIE™ RANGE

OPTIONS

Antistatic

Exeon provides anti-static extraction arms for processes containing potentially explosive materials such as flour, dust, wood/MDF dust and explosive gasses. The Extraction arms are fitted with an anti-static kit ensuring they are fully earthed throughout to prevent any static build-up.

Stainless steel Extraction arms

Stainless steel extraction arms are very common in the food industry, to ensure hygienic conditions can be maintained, and in the chemical industry where corrosive elements would eat away at standard metal hoods. Stainless steel extraction arms can also be fitted with the Anti-static kit.

Extension boom for Nellie arm

Extension booms are used where a wider area of coverage for the Extraction arm is required. These Extension booms can either be fixed, allowing the arm to be permanently suspended up to two metres out from a wall, or swinging, with rotating joints.

The Swinging Extension boom is available in sizes up to a six metre radius, with an option of one or two pivots depending on the flexibility required.

These Extension booms increase the scope of applications which the Nellie can be used for.

**The Exeon® products are a high-quality range of
LEV equipment which include the following:**

Extraction arms

Dust collectors

Mobile extractors

Extraction bench

Extract fans

Suitable for most industries, including:

- | | | |
|---------------------------|-------------------------------|------------------------|
| ■ Metalwork and welding | ■ Paint | ■ Glass industry |
| ■ Food | ■ Plastic and rubber products | ■ Textiles |
| ■ Wood Products | ■ Precious metals | ■ Chemicals |
| ■ Solvent and other fumes | ■ Pharmaceuticals | ■ Stone and aggregates |
