

# tank-flo™

**nodour™**  
EXEON®

**EXEON®**  
CLEAN AIR FOR INDUSTRY

*Odour and Pollution  
Control Units*

The Tank-flo™ is a Skid-mounted Extraction system for Odour & Emission abatement primarily for Tank Vents and Tanker Discharge vents, but also can be more widely used on process exhausts.

The Tank-flo™ uses a deep bed of Activated carbon, of a type suitably selected for the application, to provide control of high concentration discharges, with correct prefiltration to maximise carbon life.

The system is a Powered Extract system which dilutes the typical concentrated discharge from tanks.

## TYPICAL APPLICATIONS

1. All types of Storage Tanks, including Sewage, Blood, offal, Sludge, but also Chemicals, providing control of vents
2. Tanker Discharge vent points
3. Many other process extract applications requiring activated carbon

## BENEFITS OF USING THE TANK-FLO™

- A Extract rate to provide dilution of concentrated airflow to give a more temperate loading onto Carbon beds, to maximise carbon bed life

- F Horizontal bed arrangement allows for Carbon layering to control different chemicals

- C Powered Air Inlet type extract arrangement allows for Tank emptying without over-pressurising the tank
